

**Amendments To The Claims:**

Claim 1.(Previously presented)      A stent having an interior surface which bounds a lumen, an exterior surface and a sidewall extending therebetween, the sidewall comprising a plurality of segments, each of which extends from the interior surface to the exterior surface including:

        a first balloon expandable segment which is not self-expanding, the first balloon expandable segment defining a plurality of balloon expandable cells therein;

        a second balloon expandable segment which is not self-expanding, the second balloon expandable segment defining a plurality of balloon expandable cells therein; and

        a first self-expanding segment consisting essentially of a self-expanding material, the first self-expanding segment defining a plurality of self-expanding cells therein;

        the first self-expanding segment disposed between the first and second balloon expandable segments, the segments axially displaced from one another.

Claim 2.(Original)      The stent of claim 1 wherein the segments further comprise a second self-expanding segment, the second self-expanding segment disposed between the first and second balloon expandable but not self-expanding segments.

Claim 3. (Original)      The stent of claim 2 wherein the segments further comprise a third balloon expandable segment, the second self-expanding segment disposed between the second balloon expandable segment and the third balloon expandable segment.

Claim 4. (Withdrawn) A stent having first and second ends which are not self-expanding and one or more self-expanding segments therebetween.

Claim 5. (Previously presented)      A stent comprising a plurality of interconnected cells, some of the cells being self-expanding, the self-expanding cells being bounded only by self-expanding material and some of the cells being balloon expandable but non-self-expanding, the balloon expandable cells bounded by balloon expandable material, the self-expanding cells provided in one or more islands amongst the balloon expandable but non-self-expanding cells, at least one of the islands being either an end island located at an end of the stent or an intermediate island located between ends of the stent, the end island extending over less than the entire circumference of the stent and being circumferentially and axially adjacent to balloon expandable but non-self-expanding cells, the intermediate island surrounded by balloon expandable but non-self-expanding cells, wherein the balloon expandable material and the self-expanding material do

not overlap one another in a radial direction.

Claim 6. (Original) The stent of claim 5 comprising a plurality of islands of self-expanding cells.

Claim 7. (Original) The stent of claim 6 wherein the islands are regularly distributed about the stent.

Claim 8. (Original) The stent of claim 5 comprising more balloon expandable but non-self-expanding cells than self-expanding cells.

Claim 9. (Original) The stent of claim 6 wherein each of the islands contains more than one self-expanding cell.

Claim 10. (Withdrawn) A stent comprising a plurality of sections including at least one self-expanding section which extends helically about the stent and at least one balloon expandable but non-self-expanding section which extends helically about the stent.

Claim 11. (Withdrawn) The stent of claim 10 comprising a plurality of the self-expanding sections and a plurality of the balloon expandable but non-self-expanding sections.

Claim 12. (Withdrawn) The stent of claim 11 wherein the self-expanding sections and the balloon expandable but non-self-expanding sections alternate with one another along the length of the stent.

Claim 13. (Withdrawn) The stent of claim 11 wherein the balloon expandable but non-self-expanding sections are of the same width as the self-expanding sections.

Claim 14. (Withdrawn) The stent of claim 11 wherein the balloon expandable but non-self-expanding sections are wider than the self-expanding sections.

Claim 15. (Withdrawn) The stent of claim 14 wherein the balloon expandable but non-self-expanding sections are twice the width as the self-expanding sections.

Claim 16. (Withdrawn) The stent of claim 11 wherein each of the sections is stepped.

Claim 17. (Withdrawn) The stent of claim 11 wherein each of the sections comprises a plurality of cells.

Claim 18. (Withdrawn) The stent of claim 11 wherein each of the sections is in the form of a serpentine band.

Claim 19. (Withdrawn) The stent of claim 11 wherein the width of each of the self-expanding and balloon expandable but non-self-expanding sections varies along the length of the

section.

Claim 20. (Withdrawn) A stent comprising a plurality of sections including at least one self-expanding section which extends in a substantially helical direction about a longitudinal axis of the stent, the self-expanding section having a plurality of cells therein, the cells bounded only by self-expanding material, the stent further comprising at least one balloon expandable but non-self-expanding section.

Claim 21. (Withdrawn) The stent of claim 20 comprising a plurality of self-expanding sections and a plurality of balloon expandable but non-self-expanding sections.

Claim 22. (Withdrawn) The stent of claim 21 wherein the self-expanding section extends in a first helical direction and the balloon expandable but non-self-expanding sections extend in a second helical direction.

Claim 23. (Withdrawn) A method of manufacturing a stent comprising the steps of: providing a tubular stent preform or a stent preform in the form of a sheet, the stent preform made of a non-self-expanding material having a plurality of first openings therein corresponding to a desired stent pattern and at least one second opening therein for receiving a self-expandable stent material therein;

disposing a self-expandable segment in the second opening and securing it to the stent preform; and

where the stent preform is in the form of a sheet, rolling the sheet to form a tube.

Claim 24. (Withdrawn) The method of claim 23 wherein the stent preform has a plurality of second openings therein and a self-expandable segment is disposed in each second opening and secured to the stent preform.

Claim 25. (Withdrawn) The method of claim 24 wherein the stent preform is made of stainless steel and the self-expandable segments are made of a shape memory alloy.

Claim 26. (Withdrawn) The method of claim 25 wherein the shape memory alloy is an FeMnSiCrNi shape memory stainless steel.

Claim 27. (Withdrawn) The method of claim 24 wherein the self-expandable segments are secured to the stent preform via laser welding.

Claim 28. (Withdrawn) A method of manufacturing a stent comprising the steps of:

providing a tube or a sheet made of a first metal and a second metal secured one to the other;

where present, rolling the sheet into a tube;

disposing an anti-galvanic coating on the tube or the sheet;

disposing a paclitaxel/SIBS compound on the anti-galvanic coating.

Claim 29. (Canceled)

Claim 30. (Withdrawn)      A method of manufacturing a stent comprising the steps of:

disposing a tube on a mandrel, the tube comprising at least one section which is self-expanding and at least one section which is balloon expandable but non-self-expanding;

and heat treating the tube with the at least one self-expanding section expanded to a cross-section at least in excess of the maximum diameter of the balloon expandable but non-self-expanding section.

Claim 31-32. (Canceled)

Claim 33. (Withdrawn)      A method of manufacturing a stent comprising the steps of:

providing a stent preform in the form of a tube or a sheet, the stent preform made of a first metal and a second metal secured one to the other, the first metal being a shape memory metal, the second metal being a non-shape memory metal;

providing a plurality of openings in the first metal and providing a plurality of openings in the second metal; and,

where the stent preform is in the form of a sheet, rolling the sheet into a tube.

Claim 34-35. (Canceled)

Claim 36. (Previously presented)      The stent of claim 1 wherein the stent has a protective covering.

Claim 37. (Previously presented)      The stent of claim 1 wherein at least 50% of the stent is made from one piece balloon expandable metal.

Claim 38. (Currently Amended)      An unexpanded stent comprising a plurality of segments including:

a first balloon expandable segment which is not self-expanding, the first balloon expandable segment defining a plurality of balloon expandable cells therein;

a second balloon expandable segment which is not self-expanding, the second balloon

expandable segment defining a plurality of balloon expandable cells therein; and

a first self-expanding segment, the first self-expanding segment defining a plurality of self-expanding cells therein, the stent constructed and arranged so that the self-expanding cells are capable of self expansion without expansion independently of the balloon expandable cells the stent having a distal-most end and a proximal-most end, each end constructed of balloon expandable material.
